Low Maintenance

Easy Care and Durable

Because Composite Wood resists sun and water damage, it maintains its colour and beauty for years and years. You do not need to paint, stain or seal it like you do with timber and because it resists mould, mildew and warping, you won't need to replace rotting, uneven or insect-damaged boards. This saves you time and money over the lifecycle of your product. Caring for Composite Wood is easy and will keep it looking new, year after year.

Visit our Sydney Showroom to see our range of **Composite Wood streetscape furniture products**

Product List

Our starting of standard Composite Wood furniture includes:

Urban Seat

1500mm x 510mm x 750mm

Composite Wood or Cast
Iron Bracket available

Urban Bench

1500mm x 430mm x 40mm
Teak, Walnut & Mahogany

Composite Wood or Cast
Iron Bracket available

More designs will be available in the coming months...

Fire Resistance

All products are HB Grade (Hard Burning Grade). To test for fire resistance, we burn the product and if the burn speed exceeds more than 40mm per minute and less than 75mm per minute, the product is classed as HB grade. Our products have been tested to rate at 22mm per minute so we significantly exceed HB Grade, but the SGS (testing institute – www.sgs.com) test results classify our products as being HB Grade.

Graffiti Resistance

Our products are manufactured from recycled PE (polyethylene from recycled milk bottles and water tanks) and PE is not easily painted as the surface rejects foreign matter. If a composite wood product is graffitied, the graffiti should be able to be removed fairly easily by a standard, non corrosive cleaning product, so as not to damage the surface of the product. As our products all come with a sanded surface, the surface can be lightly sanded back to remove any graffiti without damaging the look of the product.

Contact us to discuss your own custom designs.

100% Recycled

PILA Composite Wood products are perfect for both indoor and outdoor applications. Our products are eco-friendly compared to timber and steel and they are a fantastic addition to any environmentally friendly project.

The raw material of PILA Composite Wood products is approximately 60% recycled HDPE (high-density polyethylene) and 40% Rice Hull waste product.

HDPE is a polyethylene thermoplastic made from petroleum. It takes 1.75 kilograms of petroleum (in terms of energy and raw materials) to make one kilogram of HDPE. HDPE is commonly recycled.

Unlike some other composite products on the market, there is no timber or timber waste used in the manufacture of PILA Composite Wood products so our products replace the use of timber entirely.

Perfect for Councils and Landscapers

Great for outdoor or indoor use!
