

ECO-Buy Environment Policy

In fulfilling its mission - to influence the market towards environmentally preferable choices, ECO-Buy is committed to leading by example through environmentally sustainable practices in its work place and activities.

We aim for our operations to exemplify our values, particularly in the implementation of green purchasing, and we will strive to avoid environmental impacts resulting from our activities. Where impacts cannot be avoided, we will reduce, responsibly manage, and, where possible, offset these impacts.

ECO-Buy's highest environmental impacts are associated with its office operations, travelling and events. Our green purchasing policy, green office program and sustainable events policy guide our decisions in these areas.

In order to uphold leading environmental standards, we will:

- set environmental targets
- monitor and benchmark our significant environmental impacts
- take action to maintain and continuously improve our environmental performance
- regularly review and report on our environmental management and performance, both internally and externally.

We aim to demonstrate best practice and inspire our members, clients, stakeholders, staff and the communities we work with.
